

Globalstar Value Added Reseller

Company Presentation

Equipnet was founded in 2002 in Milan.

The company provides high quality web service via "Web Farm's" on Italian highways.

In conjunction with Università del Sannio, Equipnet developed an operation unit in software design in Benevento. The software laboratory in Benevento deals with the development of Web applications for large companies, particularly information systems for transport and logistics.

In recent years the company has expanded its operations with the development of project Easylog for geo-localization of vehicles. Thanks to project GAD (Managing Files Repository), Equipnet has also developed ERP applications in optical archiving of documents.

Vision

Equipnet believe that new technologies may become central in the management of mobility and reducing transport costs. The results of a survey conducted by Value Vision Management Consultants, which analyzes the costs caused by congestion of the transport system, shows that mobility is an important factor of competitiveness.
