

SECURITAS ALERT SERVICES

Globalstar Value Added Reseller

Company Presentation

Since 1991, METHOD Localisation have been developing fleet management systems using different localisation means like ARGOS, GPS, INMARSAT and communication means like PMR, GSM/GPRS, Inmarsat, Thuraya & GLOBALSTAR. All of these systems are based on common and evolutionary hardware and software architecture allowing easy solutions handling 1-10 mobile units to a complex secured server tracking thousand of units. This architecture is also used to develop specific customer applications like MTOUR packaged complete solution to analyse effective delivery routes compared to planned ones. On 01st April, Metod Localisation was merged with Securitas Alert Services.

Know how

- Fleet management and tracking systems
- On board software and communication protocols
- Complete solution integration

SILEVIC localisation service

- This service allows terrestrial and overseas transportation companies to follow and monitor their mobiles
- Access to the data is done through the internet with a proprietary protocol to enhance speed and security (ASP in client/server mode) or through a simple browser module " SILEVIC WEB"

Development of specific Control Centers

Thanks to its know-how of fleet management software METOD Localisation has developed several control centers in the domain of security for drivers and merchandisers as well as fishery monitoring centers.

Main competencies

Mapping S/W

Airtime billing

Services

Simplex
